# Vestibular Rehabilitation: Evaluation and Treatment of Common Vestibular Dysfunction

### **☆ Course Description**

This introductory level course will provide clinicians with the information needed to efficiently evaluate and effectively treat patients with peripheral and central vestibular disorders. Emphasis will be placed on evidence based practice and understanding the physiologic rationale for therapeutic intervention of common vestibular disorders. This will enhance the clinician's ability to evaluate the appropriateness and effectiveness of therapeutic intervention. The course format will be lecture, demonstration with patient videotapes, and patient problem-solving sessions.

Intended audience: Physical and Occupational Therapists

### 

At the conclusion of the course participants will be able to:

- 1. Describe the normal anatomy and physiology of the vestibular system.
- 2. Discuss the pathophysiology of common vestibular disorders.
- Demonstrate an examination and interpret the findings to determine the diagnosis of common vestibular disorders.
- 4. Develop, implement and progress an intervention program based on evaluation findings and knowledge of the vestibular system.

### **★ Course Faculty**

**Timothy C. Hain, MD** is a Professor of Neurology, Otolaryngology, and Physical Therapy/Human Movement Science, Northwestern University

Medical School and Medical Director of Chicago Dizziness and Hearing. He is a board certified neurologist who specializes in the management of vestibular disorders. His areas of research include management of BPPV, ototoxicity, Tai Chi for balance disorders, and mechanisms of head stabilization. He has published more than 80 papers and chapters, most of which concern dizziness.

Janet Odry Helminski, Ph.D., P.T. is an Associate Professor of Physical Therapy, Midwestern University and a physical therapist at Chicago Dizziness and Hearing. She received her doctor of philosophy degree from Northwestern University's Institute for Neuroscience. She specializes in and lectures extensively on the management of patients with vestibular dysfunction. Her areas of research include adaptation
